

Jackall 8000 Series

Versatile - Rugged - Powerful
Versatile - Rugged - Powerful

The most important feature of this versatile tool is the level of operational safety!!

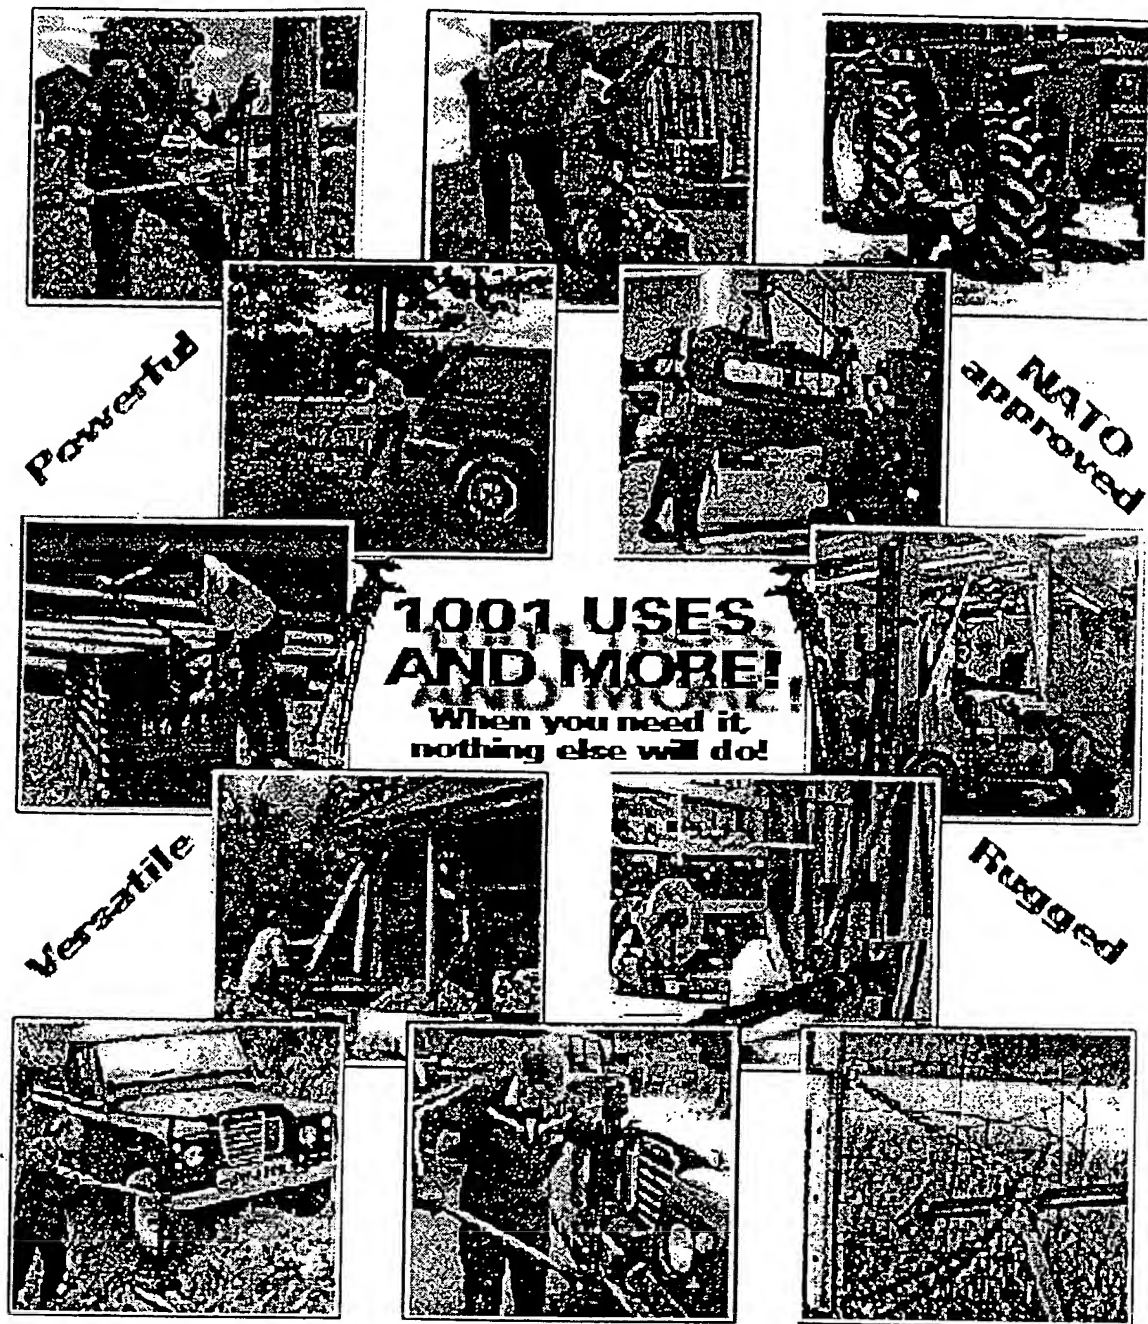

Quality features such as the patented "safety Link" are built into and tested in each and every jack

Jackall 8000 Series - *Designed for Safety!*

65 years of experience has taught us to use steel components where *impact and wear strength* are needed. Cast components are used where *strength and rigidity* are essential to assure long life and trouble free operation.

The patented "safety Link" pitman mechanism used in the "*Jackall 8000*" is manufactured of a specific steel alloy which is cut and formed into it's own unique geometry. This pitman will prevent abuse and misuse of the *Jackall*.

When used over its rated capacity the safety link will yield and the load will not be lifted. The *Jackall* customer can simply replace this safety link to restore the jack to full working condition once again.

Powerful

NATO approved

1001 USES AND MORE!
When you need it,
nothing else will do!

Versatile

Rugged

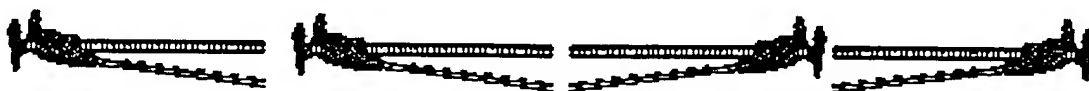

- Rugged mechanism moves load in a smooth and easy way and is easily raised up to load.
 - Made with an alloy steel beam which is hot roll-formed for strength. its holes accommodate attachment of clevis pins, chains, bolts, ropes, etc...
- Hollow, special high tensile steel handle accepts pipe/bar for additional leverage and locks against beam for convenient storage.
- 4" lifting foot and self-adjusting 27.5 sq. inch base, heavily ribbed for strength and load stability.
-
